$10 \times 2 =$	$7 \times 5 =$	$12 \times 5 =$	$10 \times 2 =$	$5 \times 7 =$
$3 \times 9 =$	$8 \times 8 =$	$3 \times 12 =$	$5 \times 4 =$	$3 \times 7 =$

1)

- a) Hari is estimating $691 - 264$.
What mistake has he made?

Hari

$600 - 300 = 300$

- b) What calculation should Hari do to find an estimate?
c) Is there a calculation you can do to find an estimate which is closer to the actual answer? Explain why.

How many days are there in April, September and November altogether?

Is a cube 3D or 2D?
How many faces does it have?
How many edges?

Is 200 in the 5 times tables? How do you know?

e.					f.					g.				
	6	0	9			3	2	6			4	8	7	
-	5	2	6		+	4	1	9		+	1	3	3	

Count in fours and colour in the grid:

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50

3) 527 people visited the museum on Saturday.

172 people visited the museum on Sunday.

Estimate how many people visited the museum over the weekend.

$$\square + \square = \square$$

How many days in a fortnight?
How many days are in April?

Is 575 in the five times table?

Is a cube 3D or 2D?

How many faces does a cube have?

Can you see anything at home that is cube shaped?

What are they?
